Greater range of motion

Inspired by the natural movement of the head and neck, Gesture™ headrest offers an unprecedented range of motion that not only provides superior comfort and support, but also more choice and control over work postures.

Increased use of large external monitors and mobile devices has created a popular new reclined working posture called—the take-it-in. With support from a headrest, users avoid unnecessary strain on the neck and shoulders.

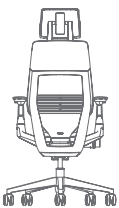

THOUGHTFUL DESIGN

Until now, headrests have largely been an afterthought component to chairs, but the Gesture headrest is thoughtfully integrated into the design, taking into consideration anthropometric factors like head size and shape, neck length and natural range of motion.

GREATER RANGE OF ADJUSTABILITY

The Gesture headrest offers workers a greater range of adjustability with a 150mm range of height adjustment, 100mm of forward pivot movement and 90° of rotation.
